

## Trireforming- An emerging technique for syngas production

Filesize: 4.51 MB

### ***Reviews***

*This publication is wonderful. I have got study and so i am confident that i am going to likely to read once again once more down the road. Its been designed in an exceedingly straightforward way which is only soon after i finished reading this ebook by which actually altered me, change the way i think.*

## TRIREFORMING- AN EMERGING TECHNIQUE FOR SYNGAS PRODUCTION

LAP Lambert Academic Publishing Jan 2014, 2014. Taschenbuch. Book Condition: Neu. 220x150x6 mm. Neuware - The proposed work outlines the modeling aspects of kinetic evaluation for different types of reforming processes namely, Trireforming of methane (TRM), partial oxidation of methane(POM), Dry reforming of methane(DRM) and Steam reforming of methane(SRM). The results figure out Trireforming to be the most synergetic process as being combination of steam reforming, pom and dry reforming, it can not only produces synthesis gas ( $\text{CO} + \text{H}_2$ ) with desired  $\text{H}_2/\text{CO}$  ratios(1.1 1.95) but also results in higher values of conversion for methane and carbon dioxide. These advantages have been demonstrated by tri-reforming of  $\text{CH}_4$  in a fixed-bed flow reactor at 1123K with supported nickel catalysts. Over 97%  $\text{CH}_4$  conversion and about 68 %  $\text{CO}_2$  conversion can be achieved in tri-reforming over  $\text{NiAl}_2\text{O}_3$  catalysts. The kinetic evaluation of partial oxidation of methane indicated the methane conversion to be around 96% with  $\text{CO}_2$  conversion of about 50.967% and  $\text{H}_2/\text{CO}$  ratio to be in range of 1 -1.7. Though POM shows higher methane conversion but it lags in  $\text{CO}_2$  conversion and  $\text{H}_2/\text{CO}$  ratio as compared to Trireforming. Moreover, in this process, oxygen is usually 40 50% higher than the required amount results excellence. 108 pp. Englisch.
