Reviews

A high quality pdf as well as the typeface applied was exciting to see. It really is written in simple words and phrases rather than difficult to understand. You will not really feel monotony at any time of your time (that's what catalogs are for relating to in the event you question me).

Excerpt: .from a maximum bending moment and direct stress; and, secondly, from a maximum deflection of the column together with direct stress. Maximum deflection of the column, and maximum moment in the column occurring from moment introduced into the column from the girder, do not occur simultaneously. Although it is not always true, it is usually the case that the maximum moment, together with the combined stress, will give the greatest fiber stress in the column. It may be necessary to design certain columns for a given static load, or it may be necessary to investigate columns for special loading in a given panel or panels. For that reason the following criteria are given. 80. Interior Columns.-- Maximum moments are caused by loading the bay adjacent to the column in question for the full height of the structure, and, where possible, by loading alternate bays in both directions from that bay. The maximum moment will be found in the second-tier columns. The maximum stress in these columns will be found by combining the stress caused by this maximum moment with the axial stress produced by the load on the floors above the first floor. Maximum deflections may be caused in the interior columns by loading spans alternate in all directions. In the case of very slender columns, the deflection may add a moment caused by the direct load to that moment causing the deflection. The stress thus produced, when combined with the dead load and such...
