

Publication Des Manuscrits de Charles Fourier Annee 1851- (1-2)

Filesize: 1.19 MB

Reviews

It in a of the best book. Indeed, it really is play, nevertheless an amazing and interesting literature. It is extremely difficult to leave it before concluding, once you begin to read the book.
(Sofia Yundt)

RareBooksClub. Paperback. Book Condition: New. This item is printed on demand. Paperback. 46 pages. Original publisher: Seattle, Wash. : Pacific Marine Environmental Laboratory, U. S. Dept. of Commerce, National Oceanic and Atmospheric Administration, Oceanic and Atmospheric Research Laboratories, 2004 OCLC Number: (OCoLC)318607501 Subject: Ocean currents -- Pacific Ocean -- Measurement. Excerpt: . . . Subsurface ADCP Data in the Equatorial Pacific 11 shift in the backscattered acoustic energy from a range set to be 0. 5 m to 2. 0 m vertically from the instrument. The beam-direction velocities, com-puted from the measured Doppler shift for each beam, are converted to earth coordinates using the relative transducer orientation and a Precision Navi-gation compass. The Argonaut-MDs were generally set to collect data once persecondfor180secondsata600-secondinterval. Thetheoreticalaccuracy 1 of the Argonaut-MD velocity measurement is 1. 8 cm s and the compass is 2. 0. Early tests by PMEL indicated that the Argonaut-MD measurements compared well with coincident ADCP velocities, but later comparisons re-vealed that the Argonaut-MD horizontal current speed was biased low (Fre-itag et al. , 2003). Investigation revealed that the bias was due to the inabil-ity of the Argonaut-MD compass tilt-sensor (Precision Navigation model TCM2) to function properly on moorings deployed in high current regimes where the instruments experience extreme lateral and rotational accelera-tions. Beginning in 2001, PMEL began to attach vanes to each instrument to reduce the acceleration of the current meters on the mooring lines. Subse-quently, dierences between ADCP and Argonaut-MD measurements have been comparable to those found between ADCP and MCM measurements. Vanes were attached to the Argonaut-MDs at 0, 110 W beginning in April 2001 for 7 months, coincident with a nearby, yearlong ADCP deploy- ment. The next deployment of Argonaut-MDs at 0, 110 W was also coinci-dent with the ADCP deployment, but the Atlas...
